EDUCATION

RV Institute of Technology and Management

Bengaluru

Bachelor of Engineering in Computer Science CGPA: 8.0/10

Expected Graduation: 2027

TECHNICAL SKILLS

Languages: C++, Java, Python, JavaScript, SQL

Frontend: React.js, HTML5, CSS3, Bootstrap

Backend: Node.js, Express.js, Flask, REST APIs

Databases: MongoDB, MySQL

Developer Tools: Git, GitHub, VS Code, Postman, Render, Vercel

Core Concepts: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, JWT Authentication, Generative AI

PROJECTS

AI Resume Analyzer | React.js, Node.js, Express.js, Gemini API | GitHub | Live Demo

- Built a full-stack AI-powered Resume Analyzer using React.js, Node.js, Express.js, and Google's Gemini API to evaluate resumes against job descriptions.
- Integrated Generative AI to automate resume analysis, providing ATS-friendly feedback, resume scoring, keyword matching, and personalized improvement recommendations.
- Developed secure RESTful APIs for PDF upload, text extraction, and AI-powered resume processing, enabling seamless communication between the frontend and backend.
- Designed and deployed a responsive cloud-based application using Vercel (frontend) and Render (backend), ensuring scalability and real-time AI-driven resume evaluation.
- Managed source code using Git and GitHub, following version control best practices for feature development, collaboration, and deployment.

MERN Expense Tracker | MongoDB, Express.js, React.js, Node.js | GitHub | Live Demo

- Developed a full-stack expense management application using the MERN stack, enabling users to securely track income, expenses, and overall financial activity.
- Implemented JWT-based authentication and authorization to provide secure access to personalized financial records and user-specific dashboards.
- Built RESTful APIs supporting complete CRUD operations for efficient transaction management, category-based expense organization, and persistent MongoDB storage.
- Designed an interactive and responsive dashboard to visualize income, expenses, and account balance in real time, improving financial insights and user experience.

AI-Based Student Mental Health & Sentiment Analysis | Flask, NLP, BERT

- Developed a Flask-based REST API to analyze student mental health using Natural Language Processing and Transformer-based BERT models.
- Implemented emotion detection and sentiment analysis by combining textual data with questionnaire responses to predict stress and risk levels.
- Designed a recommendation engine that provides personalized suggestions based on predicted mental health outcomes.
- Improved application reliability through robust input validation, API design, and error handling.
